

Natural ingredients for targeted action

For CELLRESET, PHYSIOCOSMETIC Research has identified rare ingredients among the most valuable resources of nature.

With our intimate knowledge of cellular metabolism, they act in a targeted manner on the causes of skin ageing and give CELLRESET its exceptional efficiency.

Argan stem cells to boost deep cell renewal

Papaya extract to restart the renewal cycle of the epidermis.

Polysaccharides extracted from Japanese "Natto" for deep moisturising.

White Lupin extract to boost production of ceramides.

Languedoc-Roussillon (France) Grape extract to protect the mitochondrial DNA.

CELLRESET is 100% safe

Like all PHYSIOCOSMETIC care products, CELLRESET formulation enjoys special attention paid to the selection of active and primary ingredients.

Without Parabens - Not tested on animals - Approved by independent toxicologists - Made in France according to GMP standards - Formulated to minimise the risk of allergies.

In harmony with the physiology of your skin

CELLRESET protocol relies on natural resources of defence and skin repair.

It is based on the natural cycle of renewal of the epidermis that lasts 28 days.

CELLRESET is an overnight treatment, the best time for natural cell renewal. More permeable during this period, the skin is particularly receptive to the CELLRESET ingredients.

CELLRESET

Cell Regeneration

Total 28-day anti-ageing protocol

NIGHT

by
DLG

CELLRESET is an exceptional anti-ageing solution in two stages which stimulates cellular activity of the skin and skin regeneration in order to restore youth and firmness to your skin.

CELLRESET revives the natural cycle of regeneration of the epidermis, stimulates the deep stem cells and reactivating natural production of three essential components of skin: collagen, hyaluronic acid and ceramide.

The benefits of CELLRESET

Night after night, CELLRESET fights against the causes of sagging skin and restores the strength of the dermis supporting the skin.

The complexion upon waking is radiant, the skin texture is smoothed, imperfections are blurred and wrinkles appear reduced.

The face regains the contours and tone of firmer skin. Night after night, your skin is literally reborn and regains its radiance and luminosity.

CELLRESET is a global anti-ageing solution carefully designed around five major actions:

- It restructures the supporting tissues and firms the skin
- It provides elasticity and suppleness to the skin
- It fills and smooths wrinkles
- It deeply moisturises
- It evens the complexion.

A scientific reflection on the signs of ageing

PHYSIOCOSMETIC Research has developed four modes of action to give your skin back its youthful potential:

- Night after night, the **deep stem cells** are activated to support the reconstruction of the support matrix;
- The **potential for regeneration of the skin** is preserved, thanks to the protection of stem cells of the epidermis;
- **Natural mechanisms of production** of three essential components of skin: collagen, hyaluronic acid and ceramide, are reactivated to restore skin architecture;
- The **vital energy of the cell** is maintained by protective action on the mitochondrial DNA.

Night action focused on stem cells

CELLRESET boosts stem cells during deep sleep and initiates a real "new skin" effect.

The stem cells of the epidermis and dermis are naturally regenerated. Indeed, these cells have the ability to produce new cells, which will in turn restore skin tissue and its functionality of youth.

Promotes self-repair of your skin

The natural production of essential components of the skin decreases with time, thus favouring the appearance of signs of ageing. By revitalising these mechanisms CELLRESET restores the skin's **natural repair capacity**.

Existing facial wrinkles appear reduced and the introduction of new ones is delayed.

A simple and efficient beauty ritual

CELLRESET is applied nightly in two stages. The protocol 1 +1 is easy to follow and designed to enhance the effectiveness of treatment:

- Serum Booster CR-0 is applied every night before the active concentrates. It prepares the action of the active concentrates and stimulates deep stem cells that recharge the skin with new cells;
- The active concentrate CR-1 synchronises cellular renewal and strengthens the natural production of collagen;
- The active concentrate CR-2 deeply moisturises and strengthens the natural production of hyaluronic acid;
- The active concentrate CR-3 protects the vital energy of cells and strengthens the natural production of ceramides.
